

Unfortunately due to lack of time it's time to sell my Atomic 56.

Atomic 56 is a mini prototype that in recent years has been sailed in Swedish waters, both racing (previous owner) and cruising by me. Right now the boat is on the west coast just north of Gothenburg. I have sailed Atomic with joy, it planes away quite easily and in downwind with some waves it is a pure pleasure to sail. The boat is well equipped for coastal sailing and has had continuous maintenance and updates. Most recently was painted, some change of dyneema backstays, antifouling etc. In addition, lots of small details have been fixed. Thus, it is ready to sail from day 1. The hull is made out of plywood and baked with fiberglass and epoxy. In wintertime the boat has always been stored inside. Of course, as with all boats, there is also a to-do list that comes with it. The boat comes with a cradle on wheels that can be towed shorter distances.
